SQL | Python | Data Validation | Dashboard Design | Business Requirements | UAT

PROFESSIONAL SUMMARY

Three years of experience across software engineering, IT and fintech QA. Skilled in SQL data validation, Python automation, operational dashboards and business requirements for enterprise port systems. Delivered a real-time dashboard through four client review rounds and supported bilingual stakeholder workshops and UAT.

TECHNICAL SKILLS

Data and automation: SQL Server, Azure SQL, PostgreSQL, SQLite, Excel, Python, NumPy, data processing, query optimization, business-rule validation

Dashboards and analysis: Dashboard and data-grid design, Figma, Kendo UI, Leaflet, requirements gathering, technical specifications, data modeling

Delivery and systems: UAT, release validation, defect tracking, Jira, Confluence, C#, .NET, Entity Framework Core, REST APIs, Azure, TypeScript, Angular

PROFESSIONAL EXPERIENCE

Software Engineer | Wärtsilä PortLink | Vancouver, BC

Dec 2025 - Sep 2026

- Delivered the Transit Workbench real-time operations dashboard from mockup through four client reviews to production, with locked columns, dark mode and context menus.
- Built a C#/.NET and SQL Server compliance notification system to validate documents against business rules and route exceptions; coordinated release fixes with four engineers.
- Led on-site requirements workshops in English and Spanish for port authority stakeholders and translated business logic into technical specifications.
- Supported UAT and validation across four release trains; tracked defects and change requests in Jira with business analysts, product owners and QA.
- Applied database-driven field and validation rules across Panama Canal Authority and Port of Quebec deployments to maintain consistent business logic without code changes.

IT Support | Arthur Murray | White Rock, BC

Feb 2025 - Nov 2025

- Automated scheduling and client communications as the sole technology resource for 50+ workstations, saving 10+ staff hours weekly.

QA Engineer | Gluwa | Vancouver, BC

Apr 2021 - May 2022

- Built Python, Java and C# test frameworks for fintech APIs, mobile applications and CI/CD, increasing test coverage 40% and reducing Selenium suite runtime 25%.
- Triaged test failures, documented defects and presented root-cause analyses to engineering leadership.

PROJECTS

StrawHat | Maritime Operations Data Model | SQL, SQLite, Node.js/Express, Angular

- Designed a relational model for companies, ships, dock logs and ports, with a REST API using prepared statements to serve vessel port-call data.

EnVision-Ease | SFU Capstone | Python, NumPy, OpenCV, TensorFlow

- Built a multithreaded Python pipeline combining LiDAR and ultrasonic sensor data in real time on a Raspberry Pi 5.

EDUCATION

Bachelor of Applied Science in Computer Engineering | Simon Fraser University | 2025
